free first certificate workbook with answers best second certificate workbook with answers .aspx my workbook is in.aspx format. The workbook can be opened in any program (Excel, Notepad, Word, etc) The workbook contains some pictures and macros A: You can use an ASP.NET workbook like: This workbook is a commercial workbook and has no trial or demo. If you don't want to pay for it, you might want to consider installing Office Web Apps and using it to create your documents. Q: What's the difference between M-W and M-G? What's the difference between M-W and M-G? M-W is the online version of the Merriam-Webster dictionary. The sentence "I put a word into M-W" means "I used the online version of the Merriam-Webster dictionary to find the word I'm looking for". M-G is the Merriam-Golf reference. This has fewer entries, but is a good source of golf-related definitions. The sentence "I put a word into M-G" means "I looked up the word I'm looking for in Merriam-Golf, and I've found the entry I want". Highly emissive and stable nitrogen-doped carbon dots for near-infrared fluorescence bioimaging. A novel nitrogen-doped carbon dots (C-dots) with excellent photoluminescence (PL) was synthesized via a one-step microwave-assisted pyrolysis route and their potential application in fluorescence bioimaging was investigated. Due to the nitrogen-containing moiety, C-dots display a prominent PL peak centered at  $\approx 750$  nm with a PL quantum yield (QY) of 16.1% that is a ca. four-fold increase in comparison with the conventional C-dots. The photoluminescence of the as-prepared C-dots is temperature-insensitive and can be fully recovered by rinsing with water. The excitation-wavelength-dependent PL spectra, photoluminescence decay kinetics, and the variation in PL 82157476af
